Facts and Reflections on Nuclear Weapons May 16 2022

Ban the Bomb! Dec 11 2021 During the 1950s, Michael Randle helped pioneer a new form of direct action against nuclear war, based on the teachings of Mahatma Gandhi. At the forefront of the British campaign, he worked closely with Peace News editor Hugh Brock (1914-1985) and other distinguished 'anti-nuclear pacifists' such as Pat Arrowsmith, April Carter, and Ian Dixon, serving as chairman of the Direct Action Committee against Nuclear War (1958-1961) and secretary of the Committee of 100 (1960-1961). In 1966, he helped 'spring' the Russian spy George Blake from Wormwood Scrubs Prison. Thereafter, he campaigned vigorously on behalf of the Greek democratic opposition, conscientious objectors, and Soviet dissidents. He has always been a man of rare candor and singular energy and principles, even enduring imprisonment for his beliefs. Nowadays, Michael lives in Shipley near Bradford, where he continues to write as a respected expert on 'people power'. Martin Levy's interviews with Michael Randle introduce the reader to a tumultuous life that is nothing short of extraordinary.

African Americans Against the Bomb Aug 07 2021 Well before Rev.

Dr. Martin Luther King, Jr. spoke out against nuclear weapons, African Americans were protesting the Bomb. Historians have generally ignored African Americans when studying the anti-nuclear movement, yet they were some of the first citizens to protest Truman's decision to drop atomic bombs in Hiroshima and Nagasaki in 1945. Now for the first time, *African Americans Against the Bomb* tells the compelling story of those black activists who fought for nuclear disarmament by connecting the nuclear issue with the fight for racial equality. Intondi shows that from early on, blacks in America saw the use of atomic bombs as a racial issue, asking why such enormous resources were being spent building nuclear arms instead of being used to improve impoverished communities. Black activists' fears that race played a role in the decision to deploy atomic bombs only increased when the U.S. threatened to use nuclear weapons in Korea in the 1950s and Vietnam a decade later. For black leftists in Popular Front groups, the nuclear issue was connected to colonialism: the U.S. obtained uranium from the Belgian controlled Congo and the French tested their nuclear weapons in the Sahara. By expanding traditional research in the history of the nuclear disarmament movement to look at black liberals, clergy, artists, musicians, and civil rights leaders, Intondi reveals the links between the black freedom movement in America and issues of global peace. From Langston Hughes through Lorraine Hansberry to President Obama, *African Americans Against the Bomb* offers an eye-opening account of the continuous involvement of African Americans who recognized that the rise of nuclear weapons was a threat to the civil rights of all people.

Veterans Against Nuclear Arms [file Folder]. Apr 03 2021

Nuclear Exits Jan 20 2020 Many countries have the capacity to construct nuclear weapons - even relatively poor and small ones, as the North Korean example shows us. So far, only one country - South Africa - has voluntarily given up its nuclear weapons programme. Three others - Ukraine, Kazakhstan and Belarus - gave up the Soviet Union's nuclear weapons after the end of the Cold War. A number of others (including Australia, Sweden and Switzerland) have at one time or another made plans to build nuclear weapons, but eventually opted not to do so. These stories can shed significant light on the prospects for nuclear disarmament - one of the biggest global challenges of our time. Yet they have received little scrutiny in the academic literature to date. This volume addresses that gap, bringing together scholars, practitioners and politicians to reflect on the history of nuclear exits (and nuclear non-entries) and to draw out some key lessons for future nuclear disarmament and non-proliferation efforts. Although progress on reducing nuclear arsenals has been frustratingly slow, there are strong indications that world opinion is increasingly supportive of

nuclear exits. Organizations such as International Physicians for the Prevention of Nuclear War, the International Committee of the Red Cross and the World Medical Association have all taken a strong stand against nuclear weapons. Ultimately ridding the world of nuclear weapons requires politicians to take determined action - to decide in favour of nuclear exits. The chapters in this volume show that such decisions are possible and that a worldwide nuclear exit is achievable - within our lifetimes. This book was published as a special issue of *Medicine, Conflict and Survival*.

[Ronald Reagan and His Quest to Abolish Nuclear Weapons](#) Sep 27 2020 In *Ronald Reagan and His Quest to Abolish Nuclear Weapons*, Paul Lettow explores the depth and sophistication of President Ronald Reagan's commitment to ridding humankind permanently of the threat of nuclear war. Lettow's narrative spans the start of Reagan's presidency and the 1986 Reykjavik summit between Reagan and Soviet leader Mikhail Gorbachev, during which America's Strategic Defense Initiative (SDI) was a defining issue. Lettow reveals SDI for what it was: a full-on assault against nuclear weapons waged as much through policy as through ideology. While cabinet members and advisers played significant roles in guiding American defense policy, it was Reagan himself who presided over every element, large and small, of this paradigm shift in U.S. diplomacy. Lettow conducted interviews with several former Reagan administration officials, and he draws upon the vast body of declassified security documents from the Reagan presidency; much of what he quotes from these documents appears publicly here for the first time. The result is the first major work to apply such evidence to the study of SDI and superpower diplomacy. This is a survey that doesn't merely add nuance to the existing record, but revises our very understanding of the Reagan presidency.

[Protection of Food and Agriculture Against Nuclear Attack](#) Jun 05 2021 Excerpt from *Protection of Food and Agriculture Against Nuclear Attack: A Guide for Agricultural Leaders* The area of destruction resulting from the blast, heat, and initial radiation will vary with the size of the weapon, the height of the explosion, and to some extent with the terrain and atmospheric conditions at the time of the explosion. [People Against Nuclear Energy](#) Mar 02 2021 India, a leading nuclear power in South Asia, has long been promoting nuclear energy, particularly since climate change has been recognized as a global issue. However, little output of significance has been produced so far; what has emerged, instead, are numerous local protests at the sites where these power projects are being planned, proposed and established. The first people's history of anti-nuclear movements in India, *People Against Nuclear Energy: Anti-Nuclear Movements in India* explores the trajectories of these projects and the protests against them. It covers five decades of protests spanning nine states of the country. This book, with chapters by both Indian and foreign scholars, attempts to understand these protest movements better by taking a closer look at the history and local contexts that have inspired them. Our world, its people and the resources we require share a delicate relationship, and that deep consequential intersection is where this text is positioned.

The War Against Nuclear Power Feb 25 2023

Nuclear Power Is Not the Answer Aug 27 2020 The world-renowned antinuclear activist's expertly argued (The Guardian) case against nuclear energy. In a world torn apart by wars over oil, politicians have increasingly begun to look for alternative energy sources and their leading choice is nuclear energy. Among the myths that have been spread over the years about nuclear-powered electricity are that it does not cause global warming or pollution, that it is inexpensive, and that it is safe. Helen Caldicott's look at the actual costs and environmental consequences of nuclear energy belies the incessant barrage of nuclear industry propaganda. Caldicott reveals truths, Martin Sheen has said, that confirm we must take positive action now if we are to make a difference. In fact, nuclear power contributes to global warming; the true cost of nuclear power is prohibitive, with taxpayers picking up most of the tab; there's simply not enough uranium in the world to sustain nuclear power over the long term; and the potential for a catastrophic accident or a terrorist attack far outweighs any benefits. Concluding chapters detail alternative sustainable energy sources that are the key to a clean, green future.

Nuke-rebuke Jun 17 2022

The Legality of Threat Or Use of Nuclear Weapons Sep 20 2022 "

"The threat or use of nuclear weapons would generally be contrary to the rules of international law applicable in armed conflict, and in particular the principles and rules of humanitarian law ... There exists an obligation to pursue in good faith and bring to a conclusion negotiations leading to nuclear disarmament in all its aspects under strict and effective international control." - Advisory Opinion of the International Court of Justice, 8 July 1996 "This book shows how courageous states from the developing world, working in concert with

visionary lawyers, physicians and other sectors of international civil society, boldly obtained astonishing results from the highest court in the world. The World Court clearly ruled that the threat or use of nuclear weapons is illegal in almost all conceivable circumstances. The Court further underlined the unconditional obligation of the nuclear weapon states to begin and conclude negotiations on nuclear disarmament in all its aspects. It is now up to all of us to determine the follow-up, whatever the opposition. We cannot end this century without clear commitments and steps to eliminate nuclear weapons." - Razali Ismail, Permanent Representative of Malaysia to the United Nations, President of the United Nations General Assembly, 1996-1997 "It is not often that a judicial opinion on a given question is both hailed and criticized by participants on all sides of the question. This book, written by a leading member of the team that helped to prepare the case on the illegality of the threat and use of nuclear weapons, explains succinctly what the World Court, and the judges in their separate statements, did and did not say. In so doing, it makes a compelling case for the proposition that the Opinion represents a milestone on the road to nuclear abolition." - Peter Weiss, Co-President, International Association of Lawyers Against Nuclear Arms The 20th century has been defined in large part by the unleashing of the terrible destructive power of the atom, and the subsequent struggle to overcome the threat of nuclear annihilation. If humankind survives, the 8 July 1996 Advisory Opinion of the International Court of Justice, and the extraordinary process that led up to it, will have played an essential role. The (Il)legality of the Threat or Use of Nuclear Weapons is a concise yet thorough guide to the case. In straightforward language, it describes the history of this unprecedented initiative and summarizes and explains states' arguments to the Court, the Court's findings, and the separate statements of the judges. The author provides cogent expert analysis and, most importantly, reveals how the opinion imparts hope and points the way to the future: "The Court has authoritatively interpreted law which states acknowledge they must follow, including humanitarian law protecting civilians from indiscriminate effects of warfare, the United Nations Charter, and the Nuclear Non-Proliferation Treaty. The implications are profound: abandonment of reliance on the threat and use of nuclear weapons as an instrument of national policy, and expeditious elimination of nuclear arsenals. The opinion can be cited as an authoritative statement of the law in any political or legal setting - including the United Nations and national courts and parliaments - in which nuclear weapon policies are challenged." John Burroughs, an attorney for the Western States Legal Foundation in California, served as the legal coordinator for the World Court Project/International Association of Lawyers Against Nuclear Arms at the November 1995 hearings before the International Court of Justice. "

[Economic Sanctions Against a Nuclear North Korea](#) May 04 2021 This book provides a thorough historical overview of U.S. and U.N. sanctions against North Korea since 1950. Several essays propose ways to make such sanctions more politically effective while limiting their harmful humanitarian consequences. The book also discusses the impact of the newest, six-nation agreement signed in February 2007 which would shut down North Korea's nuclear facility in return for economic aid and a security guarantee.

[The Non-nuclear Defense of Cities](#) Jul 06 2021 The active defense of large populated areas against nuclear-armed ballistic missile bombardment has been one of the abiding problems of modern military strategy. In this technical volume addressed to policy analysts and military specialists, former Lt. General Daniel Graham offers a comprehensive blueprint and strategic rationale for non-nuclear protection of urban populations. The system described consists of a combination of spaceborne boost-phase and midcourse interceptors of attacking ballistic missiles, plus a ground-based missile defense, all using non-nuclear kill mechanisms. He also shows how such a system could be militarily sound, technologically feasible, fiscally responsible, and politically practical before 1990. ISBN 0-89011-586-9 : \$25.00.

Campaign Against Nuclear Energy (W.A.) Apr 15 2022

The World After Nuclear War Nov 29 2020

Mobilizing Against Nuclear Energy Apr 27 2023 In the past two decades young people, environmentalists, church activists, leftists, and others have mobilized against nuclear energy. Anti-nuclear protest has been especially widespread and vocal in Western Europe and the United States. In this lucid, richly documented book, Christian Joppke compares the rise and fall of these protest movements in Germany and the United States, illuminating the relationship between national political structures and collective action. He analyzes existing approaches to the study of social movements and suggests an insightful new paradigm for research in this area. Joppke proposes a political process perspective that focuses on the interrelationship between the state and social movements, a model that takes into account a variety of forces, including differential state structures, political cultures, movement organizations, and temporal and contextual factors. This is an invaluable work for anyone studying the dynamics of social movements around the world.

Advising the Householder on Protection Against Nuclear Attack

Dec 23 2022 In 1963 the Home Office and Central Office of Information distributed this handbook for the civil defence, police and fire services to advise the public on what to do in the event of a nuclear attack. The booklet told people what to do to protect themselves, their family and their home. From how to build an outdoor

fall-out shelter and put together a survival pack, to what to do if a warning sounds, this is a terrifying glimpse of life under the threat of nuclear attack. Published to coincide with the V&A's Cold War Modern exhibition, this fully illustrated facsimile is also an excellent example of graphic design and illustration from the period.

The 300 Mar 26 2023 Military and security expert Daniel Wasserbly introduces the elite unit tasked with protecting the nation from long-range weapons of mass destruction. Comprised of just three hundred soldiers, the United States Army's 100th Missile Defense Brigade and 49th Missile Defense Battalion utilize sophisticated and cutting-edge technology to monitor the skies and seas surrounding the country and shield three hundred million Americans against any potential nuclear

threat. Named for the number of Spartan warriors who defended Greece at the Battle of Thermopylae, these vigilant individuals endure rigorous, always-evolving regimens to maintain peak efficiency in the event of an actual nuclear strike. Assigned to extraordinary locations at Fort Greely, Alaska and Schriever Air Force Base, Colorado, the 300 are responsible for the highest levels of homeland security. They not only maintain a never-ending watch via radar and sensor arrays, but receive continuous training in operating advanced interceptors designed to home in on and destroy in-flight ballistic missiles. It's a complex—and occasionally unreliable—defense system that scientists and engineers are always improving and upgrading. With unprecedented access to the highly classified strategic nerve centers of U.S. Northern Command in Cheyenne Mountain, years of research,

and dozens of exclusive interviews with normally inaccessible missile crews, Wasserbly reveals the incredible true story behind the 300's essential defense operations.
