The Taming of Evolution Sep 28 2020 The theory of evolution has clearly altered our views of the biological world, but in the study of human beings, evolutionary and preevolutionary views continue to coexist in a state of perpetual tension. *The Taming of Evolution* addresses the questions of how and why this is so. Davydd Greenwood offers a sustained critique of the nature/nurture debate, revealing the complexity of the relationship between science and ideology. He maintains that popular contemporary theories, most notably E. O. Wilson's human sociobiology and Marvin Harris's cultural materialism, represent pre-Darwinian notions overlaid by elaborate evolutionary terminology. Greenwood first details the humoral-environmental and Great Chain of Being theories that dominated Western thinking before Darwin. He systematically compares these ideas with those later influenced by Darwin's theories, illuminating the surprising continuities between them. Greenwood suggests that it would be neither difficult nor socially dangerous to develop a genuinely evolutionary understanding of human beings, so long as we realized that we could not derive political and moral standards from the study of biological processes.

The Bone Lady Dec 12 2021 "On the first day of the search, I failed to find the body." So writes forensic anthropologist and bioarchaeologist Mary H. Manhein—or "the bone lady," as law enforcement personnel call her. In this, one of dozens of stories recollected in her powerful memoir, Manhein and the state police eventually unearth a black plastic bag buried in the banks of the Mississippi River containing the body of a man who has been missing for five years. After the painstaking process of examining the remains, confirming the victim's identity, and preparing a formal report for the police, Manhein testifies for the prosecution at the murder trial. The defendant is convicted (in no small part because of Manhein), and "the bone lady" has helped solve yet another mystery. As

director of the Forensic Anthropology and Computer Enhancement Services (FACES) Laboratory at Louisiana State University, Manhein unravels mysteries of life and death every day. In *The Bone Lady*, she shares, with the compassion and humor of a born storyteller, many fascinating cases that include the science underlying her analyses as well as the human stories behind the remains. Manhein, an expert on the human skeleton, assists law enforcement by providing profiles of remains that narrow the identification process when the traditional means used by medical examiners or coroners to conduct autopsies are no longer applicable—simply put, when bones are all that are left to tell the story. She assesses age, sex, race, height, signs of trauma, and time since death, and creates clay facial reconstructions. Although Manhein enjoys solving high-profile cases, her personal crusade is identifying the John and Jane Does who wait in her lab. Manhein's own words perfectly characterize her mission: "Identifying a victim can bring peace of mind to the family and can help them to go on with their lives. Sometimes, peace of mind is the only gift that I can give."

Histories of American Physical Anthropology in the Twentieth Century

Mar 15 2022 *Histories of American Physical Anthropology in the Twentieth Century* chronicles the history of physical anthropology--or, as it is now known, biological anthropology--from its professional origins in the late 1800 up to its modern transformation in the late 1900s. In this edited volume, 13 contributors trace the development of people, ideas, traditions, and organizations that contributed to the advancement of this branch of anthropology that focuses today on human variation and human evolution. Designed for upper level undergraduate students, graduate students, and professional biological anthropologists, this book provides a brief and accessible history of the biobehavioral side of anthropology in America.

Paul Broca, Founder of French Anthropology, Explorer of the Brain Aug 28 2020 This elegant and comprehensive scientific biography recounts the life of Paul Broca, one of the world's most inventive and prolific scientists, whose work touched not only the fields of surgery, neuroanatomy, neurophysiology, and the neuropathology of speech, but statistics, hypnosis, blood transfusion, and the grounding of the French school of anthropology, as well. Although Broca is known primarily for providing the working basis for all future cerebral localization (he was the first to identify "Broca's area" --a small patch on the convoluted surface of the brain--as the central organ for speech), this portrait of Broca also describes his fundamental role in the establishment of modern scientific "laboratory" medicine, and his broad capacity and appetite for science as a whole. His enduring curiosity and insistent pursuit of truth led him through an exciting course of study, which often placed him philosophically in the position of utilizing doubt as his strongest investigative impetus. The author, Francis Schiller, --himself a neurologist-- underscores Broca's vast contributions to both practical and moral science with keen insights and scholarly acumen. Historians of science, neuroscientists, and general readers alike will enjoy this enlightening and important biography.
